JUL 1976

Chevron Chemical Company
ORTHO DIVISION
Attention: Mr. J.M. Ospenson
940 Hensley Street
Richmond, CA 94804

Subject: EPA Experimental Use Permit No. 2X9-EUP-71³
ORTHENE 75-S (Grapes)
Effective Dates: JUL 6 1976 to JUL
Quantity Authorized: 7,500 pounds of active ingredient

Gentlemen:

On the basis of the information furnished by the applicant and the annexed program, an Experimental Use Permit under Section 5 of the Federal Insecticide, and Rodenticide Act, as amended (26 Stat. 933), is hereby issued for the named pesticide. Shipment and/or use under this permit is subject to the provisions of 40 CFR 172.

The issuance of an experimental use permit does not exempt the permittee from compliance with any applicable state pesticide regulations. Prior to shipment you should consult the State Pesticide Regulatory Officials of any state in which you intend to conduct your experimental program.

A temporary tolerance for residues of the active ingredient in or on grapes has been established under the provisions of the Federal Food, Drug, and Cosmetic Act.

Based upon the experimental program submitted, this product may be shipped for use under this permit to: Arkansas, Arizona, California, Michigan, New York and Washington.

The labeling submitted in connection with the application for an experimental use permit is acceptable, subject to the following comments, and a stamped copy is enclosed for your records. This labeling, with required changes, must be used for all shipments under this experimental use permit. Submit five copies of revised labeling for our records.

1. The statement "Not for sale to any person other than a participant or cooperator of the EPA-approved Experimental Use Program" must appear on the label.
2. Add the EPA Establishment number to the label.

Page 2

3. The number assigned to this permit must appear on your labeling preceded by "EPA Experimental Use Permit No."

We note that the label calls for the use of .5-1 lb ai/A while the program calls for the use of .5 to 1.5 lbs ai/A. Please explain this discrepancy.

During the course of the experimental program ensure that field observations are undertaken for effects on birds and small mammals.

Prior to petitioning for permanent tolerances additional residue data for raisins, raisin waste and dried grape pomace will be required. These data should include not only the residue levels on the fresh grapes, raisins and grape pomace but also the weights and percent moisture of the samples. From these data, determinations will be made as to whether or not an actual loss residue occurs upon processing, or if any significant conversion of acephate residues in Monitor occurs during processing. Field treated grapes should be used in these studies as essentially all of the residue resulting from the proposed use are translocated into the grapes.

All information required under the regulations for registration which has not been submitted will be required prior to registration or petitioning for permanent tolerances. Refer to Federal Register of July 3, 1975, page 28242.

Sincerely yours,

Charles L. Smith
